Fritchman Winter Management, Inc.'s Scan Profiler will profile any document or image to your ProLaw database. Whether you scan to a network folder or to a folder on your workstation, the FWMI Scan Profiler can profile your images directly into your ProLaw database. We have versions that will work with Sybase 5, Sybase 7 and Microsoft SQL Server, and ProLaw databases from v7.x to v11.x.

We set up an ODBC connection to your database, and point to your prolaw.ini file so that matter specific information can be validated at the time of profiling. We make sure that the tool looks to the server (Site) that houses your ProLaw database. This information is stored in your workstation's registry so that you do not have to re-enter the information every time the Scan Profiler is launched.

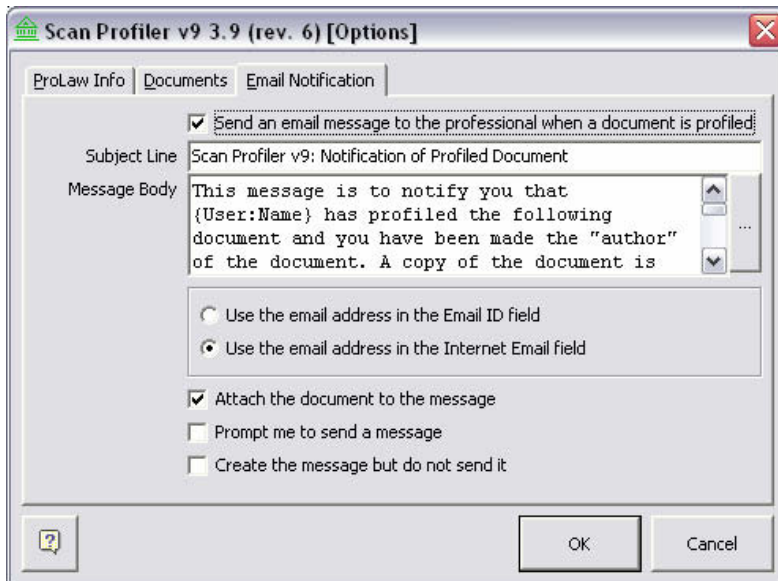

The Documents tab allows you to choose which folder you want to profile from. Most often, you will want to move the document into ProLaw, deleting the original from the folder.

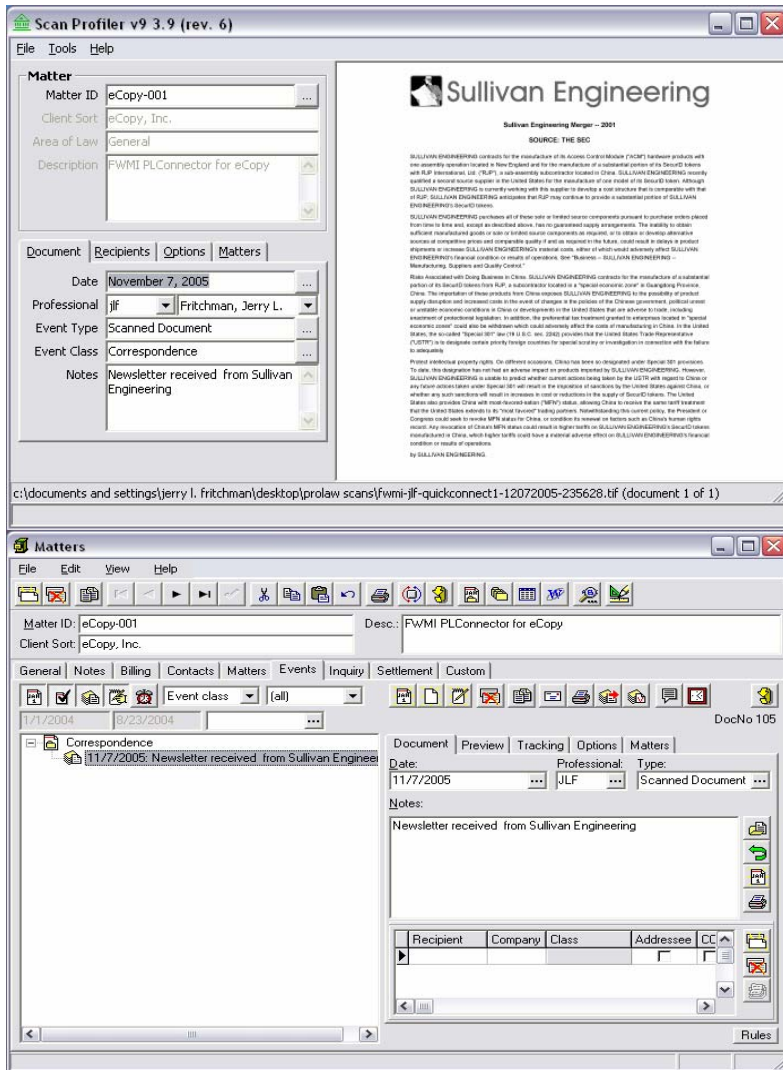

The LaserFiche Integration profiles documents into ProLaw AND copies the file to your LaserFiche location giving the image the ProLaw Document Number.

Other options change the way the Profiler behaves.

The Email Notification tab allows you the option of sending an email to someone informing them that a document or image has been profiled into ProLaw. You have the option of changing the message body.

The Email ID field from your ProLaw Professionals records uses your Exchange email names. The Internet Email field from your ProLaw Professionals records uses full path internet email addresses.

Once you have set your Scan Profiler preferences, the first item in your profiling folder is displayed in the right side of the profiler screen. ProLaw information is validated in the left side of the profiler screen. If you do not know your Matter ID, then click the ellipses to poll your database. Here, you can search by Client Sort, Matter Description, or any other method to find the correct matter. The professional initials and name are the recipients of email notification if you have set that preference in your Scan Profiler. The Event Type and Event Class ellipses also poll the database. The Notes field will default to either the Event Type name (Document Type) or the file name, but you can change or add to the notes which also display in ProLaw. The Recipients, Options and Matters tabs mirror those found in ProLaw.

Fritchman Winter Management, Inc. is a provider of training, support, customization and integration tools for ProLaw® Software. We are Certified Thomson Elite Alliance Partners and have undergone extensive training in all versions of ProLaw.
