

The FWMI ProLaw Connector for eCopy ShareScan OP

Process for Scanning to ProLaw via the Connector

Using the FWMI ProLaw Connector (PL Connector), paper documents can be scanned directly into your ProLaw database using your eCopy-enabled digital copier or scanner. The PL Connector acts as an interface between your copier or scanner and your ProLaw document management system. Once eCopy ShareScan OP is installed on your device, you can add the PL Connector leveraging your eCopy-enabled copier or scanner for inputting information directly into your ProLaw database.

Place single or multiple documents in feeder ...

Choose the FWMI Scan to ProLaw button ...

The screenshot displays the ProLaw software interface. At the top, a document preview for 'Sullivan Engineering' is shown, including a table of construction costs and a 'Next' button. Below this, the 'Scan Profiler v9 3.9 (rev. 6)' window is open, showing document settings like 'Letter', '1 Sided', and 'GrayScale'. The main window displays the scanned document with a 'Matter' sidebar containing fields for 'Matter ID', 'Client Sort', 'Area of Law', and 'Description'. Below the document, a 'Matters' window shows a list of documents with a 'Correspondence' entry for '11/7/2005: Newsletter received from Sullivan Engineering'. The interface includes various toolbars and navigation buttons.

Your preview appears on the eCopy screen . . . choose the Next button . . .

Authenticate to your ProLaw database and quickly fill in the fields according to your existing document management procedures.

Your document is now visible from your ProLaw interface.
